About XRhodium

XRhodium is NOT a fork of Bitcoin

It is a new crypto asset, simple and transparent, with long-term vision for investors and scarcity to help drive its value, built on a fast and secure blockchain with upcoming anonymization features.

There will only ever be **2.1 million XRC**

XRhodium [XRC] uses its unique blockchain with total supply of 2.1 million XRC. It is programmed in **C# language and is POW only**. Devs are honestly and steadily developing XRhodium's Unique solutions for investors for the long-term. XRhodium will also join one of the anonymity spaces.

Its store-of-value qualities are further supported by a set of features that meet the demand for a **long-term crypto investment**, incentivizing a **strong-hand investor** behaviour and bridging the gap between the world of crypto and traditional investment.

Unique solutions for investors

1. Strong Hands Programme

Honest and simple reward program for investors

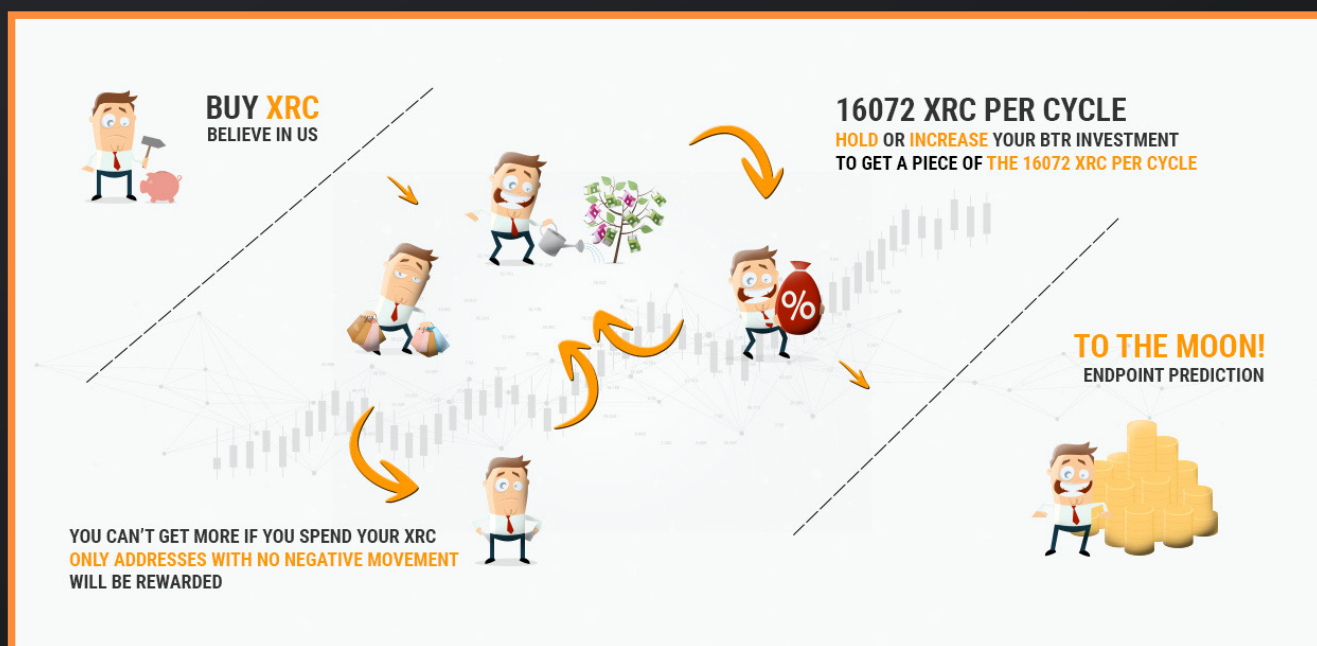

Earn XRC by holding XRC. Strong Hands and exit-aversion; two qualities that set XRC investors apart from the rest. Build your stack through a free participation in the Strong Hands Programme.

The XRhodium Strong Hands programme is an innovative use case feature, which rewards proactive holders and stimulates new investment. **Every 3 months you can earn a piece of 16 072 XRC** distributed through rewards for every programme cycle.

The Strong Hands Programme rewards proactive holders each quarter and stimulates new investment. Through this program, you can earn a reward of between 0,5% and 30% on your XRC holdings every year.

All XRhodium holders can participate and their wallet addresses will be included automatically. Thus, no specific actions need to be taken by the users to enroll in the programme cycles. An **automatic snapshot** of the individual balances will take place at the beginning and the end of every cycle (note that the closing snapshot for one cycle is also the opening snapshot for another cycle). Rewards will be then automatically transferred to the addresses that managed to avoid any negative balance movement.

Examples

A: 10/1: 100 XRC, 1/1: 100 XRC without negative movements. Rewarded on 100 XRC

B: 10/1: 100 XRC, 1/1: 120 XRC without negative movement (receive 20 during period):

Rewarded on 100 XRC

C: 10/1: 100 XRC, 1/1: 150 XRC transfered out 20 (left empty), transfered in 30 during quarter:

No reward

D: 10/1: 0 XRC, 1/1: 100 XRC transfered in 100 XRC: No reward

E: 10/1: 100 XRC, 1/1 100 XRC transfered out 20 on 10/5 and transfered in 100 on 11/10:

No reward

An address with zero balance on 10/1 gets no reward no matter what

Read more about how it works at our mainpage:
<https://www.xRhodium.org/En/StrongHandsAirdrop>

2. The Crypto Trinity

BTC + LTC + XRC = The Crypto Trinity

XRhodium was introduced to a market environment that lacked the appeal for investors looking for a **long-term investment in crypto securities**. Ever since XRC has met every objective to effectively fulfil this role, one that no single cryptocurrency has managed to subsume so far.

XRhodium's inherent qualities naturally discern it from the plethora of altcoins available on the market that lack any viable use case. But more importantly, they are the bases to a natural convergence with Bitcoin and Litecoin. The three coins (XRC, BTC, LTC) form **an efficient ecosystem** that can facilitate users/investors with different needs and preferences.

Where LTC has traditionally provided its users with primarily transactional properties and BTC still fails to find its appeal for traditional investors, XRhodium emerges as the **natural complement to meet the demand for long-term security investments**, investment diversification, a coin that is tightly held and

transparent towards its users. For these reasons XRhodium represents the final piece of the puzzle, the Crypto Trinity, whose efficient co-existence satisfies the complete spectrum of investors and their diverse needs.

3. XRC on decentralised Precious Metals Market

Our vision is to make the first step into the free world without borders or limits which are connected to the supervision.

FreeMarket.one is decentralized application that will bridge **the gap between crypto and traditional investments**. It will facilitate P2P exchange among XRC and **precious metal investors** through decentralized and efficient matching of supply and demand with no intermediaries through FreeMarket.one.

People all over the world looking to protect or increase their wealth through investing. Yet, they are limited by external factors causing market inefficiency. On the other side, there are sellers, who cannot find the right buyers. Our blockchain-driven decentralised marketplace can bridge this gap and achieve a new crypto-enabled market equilibrium. The convergence between

precious metals and crypto investment also supports greater adoption and usability of digital assets and expands the market for precious metals traders.

Channel of free exchange

Anonymity – Your IP address is protected through the Tor network.

Barter – Free exchange of precious metals and XRhodium (XRC) tokens.

Safe and secure – Decentralised system based on blockchain technology.

The technology behind FreeMarket ONE

Transactions on this platform are irreversible and decentralised using **blockchain technology**. Full anonymity and masking of IP addresses is achieved via implementation of **Tor technology**. This platform also uses **Microsoft NET Core technology** to ensure platform-independent functionality on Windows, Linux or MacOS.

Mining

XRhodium's development team created the mining pool at <http://poolcore.xRhodium.org/>

Find All XRC pools on MiningPoolStats at: <https://miningpoolstats.stream/xRhodium>

Any equipment that supports XRC's X13 algorithm can mine it, as discussed in the XRhodium tutorial How to mine XRhodium [XRC] at:

https://www.reddit.com/r/XRhodium/comments/dnsv18/bitcoin_rhodium_mining_guide/

Calculators:

Network nodes:

Primary nodes: 20+

Other nodes: 100+

XRhodium Fact sheet

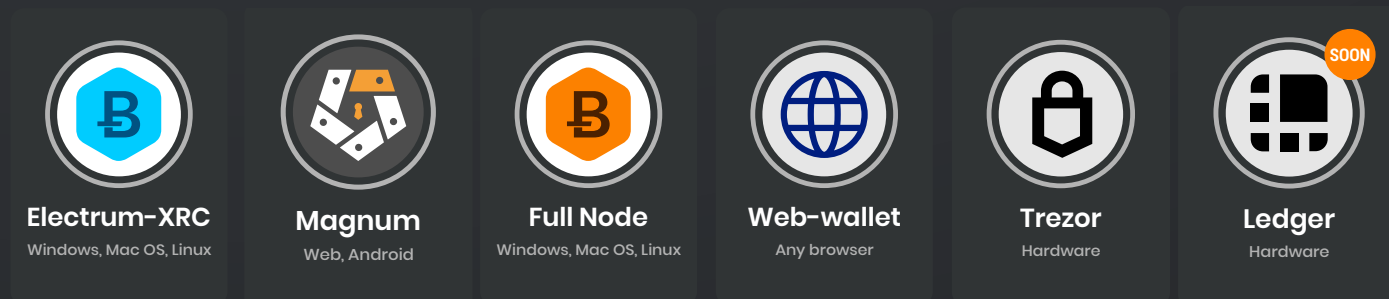

Technical specifications

- Coin ticker: XRC
- Max supply: 2.1 million coins
- Open source: YES
- Language: C#
- ICO: NO
- Genesis block: October 20, 2018 at 6:16:18 PM UTC
- PoW Hash algorithm: x13
- Block time: 10 minutes
- Block size: 4MB
- Block reward: 2.5 XRC
- Halving: every 210,00 blocks
- Reward after halving: 1.25 XRC
- Difficulty adjustment: every 2016 blocks

Why we have started developing XRhodium

...to create a Unique Crypto commodity, For the Long-Term

In late 2017, amidst a surge in altcoin issuance – particularly, Bitcoin hard forks – our Europe-based development team decided to try something different. For one, we viewed hard forks, for the most part, as Bitcoin clones that would be difficult to discern from the real thing. Second, after the first two, Bitcoin Cash and Bitcoin Gold, none had been supported by major exchanges or wallets – making them nearly impossible to acquire; let alone, safely. Lastly, in a world where hundreds of new altcoins were emerging, it was becoming clear that without a viable, long-term use-case – that could be convincingly communicated to investors – the odds of significant price appreciation were extremely low.

First, we considered what other altcoins were doing – and then, what Bitcoin couldn't do, given its ability to subsume nearly all vital crypto asset functions. Which is when we came up with the idea of “ultra-Bitcoin scarcity”; i.e., a coin with all of Bitcoin's best features, and a lifetime **cap of just 2.1 million**, or one-tenth of Bitcoin's; of which, roughly half would trade upon launch, with the other half to be mined by the public over the next 100 years. Additionally, we added a privacy feature, in our quest to create a crypto asset that would cater to large, long-term holders.

Next, we determined that the best way to build community was to distribute XRhodium via an “airdrop” to existing Bitcoin holders. By

airdrop, we mean that unlike hard forks, there is no requirement for a third party to split and/or store the coin. Instead, proactive Bitcoin holders could claim XRC by “registering” non-zero balance public Bitcoin addresses from online and offline wallets in which they held their own private keys – like online Electrums or offline Trezors and Ledgers.

By “signing” the unique message supplied by XRhodium, one could prove Bitcoin ownership **without giving out their private keys**; thus, enabling the receipt of FREE XRhodium in the subsequent claiming process – in one’s personal, online XRhodium wallet.

Finally, we aimed to create a “community” to foster long-term support, through the Discord chat room that we, the development team, actively monitor in a de facto “customer service” function. Through Discord, Twitter, and Reddit, we believe awareness of XRhodium’s “ultra-Bitcoin scarcity” use case has increased, to the point that we expect the launch, currently scheduled for late summer, to be met with significant investor enthusiasm.

Ultimately, in the words of one of the project’s most well-known public supporters, **“It’s the hope to carry Satoshi’s vision even further and establish XRhodium as the “Elite Bitcoin”** to be BRODL’ed as passionately as Bitcoin is HODL’ed.

October 22, 2018 – XRhodium’s development team announced that, after a year of exhaustive work, the XRhodium (XRC) MainNet was launched...

Roadmap

We have made huge progress from our first idea of precious crypto asset till nowadays developement. Find our fullfilled milestones below.

2017-Q4

FIRST AIRDROP ANNOUNCED

XRhodium is the first mineable coin which has enabled individuals throughout the world to experience an introduction to digital currencies. First Airdrop recipients were not required to hold BTC on their registered addresses.

2018-Q2

WEB WALLET LAUNCH

XRhodium Wallet was launched for public

CLAIMING XRC

577,275 XRC were successfully claimed

2018-Q3

TESTNET

Testnet launched for mining pool testing, transactions, wallet functions stability testing.

SERVER NETWORK DECENTRALISATION

The decentralised server network can be observed here:

<https://network.xRhodium.org/>

AIRDROP #2

The second and final round of Airdrop distributed XRC among BTC users, who did not claim their share before.

2018-Q4

MAINNET LAUNCHED

On October 22 the XRhodium MainNet was officially launched attracting enormous attention of both previous and new community members, as well as broader crypto public. Subsequently, an organic OTC market was established that allowed XRC holders that started the price-searching process.

MININGCORE POOL LAUNCH

Following the technical issues with the pool caused by the Coinium mining pool software architecture, Miningcore software was implemented that brought along an unprecedented interest of miners as the hashrate skyrocketed <http://poolcore.xRhodium.org/>.

THE CRYPTO TRINITY

Our new vision for cooperation with BTC and LTC is announced.

STRONG HANDS PROGRAMME

XRC Investors Hold & Get Rewarded each quarter

BISQ WITH XRhodium

Bisq is an open-source desktop application that allows you to buy and sell bitcoins in exchange for national currencies, or alternative cryptocurrencies

WASABI WALLET ON XRC TESTNET

New Wasabi wallet with CoinJoin anonymization feature on XRC TestNet.more TBC.

WORLD WIDE P2P METAL MARKET

Website of [FreeMarket.One](#) released.

Long Term Vision

Our long term goal is to maintain anonymity, scarcity, security. As you can see below, we will join the precious metal market and cooperate with Gold, Silver, Rhodium, Platinum business partners and develop P2P trading eshop with real precious metals.

2020+

MERCHANDISING

Continued merch to spread our message.

METAL RHODIUM PARTNERS

Partnership established with precious metal market.

WORLD WIDE P2P METAL MARKET

Through Freemarket.one, efficient decentralised marketplace for precious metals trading.

X13 ASIC FIRMWARE SUPPORT

Negotiations will begin with ASIC providers.

ANONYMISATION FEATURE & BLOCKCHAIN INTEROPERABILITY

Presentation of next improvements and a new connection
feature for The Crypto Trinity

ATM INTEGRATION

Negotiations with ATM providers.

We are regularly updating the progress and adding new features
to the roadmap. Do not forget to check out the new updated road
map at:

<https://www.xRhodium.org/En/RoadMap>

Ambassador program

Do you want to become a part of a digital freedom ecosystem to shape the world of tomorrow? Then what are you waiting for?

Create the local XRhodium community in your city by **organizing regular knowledge-sharing meetups and represent us as an XRC Ambassador!** We will support you with anything you need to bring digital freedom vision to your city.

If you're interested in participating, please fill in this form so the XRC team can learn more about you. We are always looking for enthusiastic supporters to spread our message over the world.
